ORGANISING CHAIRMAN MESSAGE

Dear Friends and Colleagues,

On behalf of the organising committee, we are pleased to invite you to the First Malaysia Conference on Rare Disorders held together in conjunction with the 2011 edition of Medical Genetics Conference. This year, we have chosen the theme "Changing Mindsets and Transforming Lives" in line with the vision of a caring society and taking new directions towards examining issues related to the Disabilities Act and the promise of a career in Genetic Counselling. We will also introduce recent exciting advances made in the field of human genomics and its implications to health care.

A unique feature of the Conference will be the involvement of parents, families and non-governmental organisations in presenting their viewpoints and the opportunity to engage government bodies and obtain services that are available for the child with special needs.

Also, the Third National Dysmorphology Seminar will be held with the focus on "Skeletal Dysplasia". Participants are invited to submit patients with dysmorphic features for discussion during the Dysmorphology Club session

We have invited prominent speakers both locally and from overseas to speak on a number of new developments in medical genetics. There will be poster sessions, two concurrent sessions and 8 plenary lectures during this conference. Two panel discussions will be held and it is envisaged that official statements will be made with regards to the outcome of these panel discussions. We hope to enhance closer collaboration between non-governmental organisations as well as government agencies in caring for individuals born with birth defects and rare disorders in Malaysia.

This conference is jointly organised by the Medical Genetics Society of Malaysia and the Malaysian Rare Disorders Society. We look forward to seeing you during this Conference.
